- Power Supply Unit (PSU): Provides the necessary voltage and current for charging.
- Voltage/Current Regulation Module: Ensures the battery is charged within safe limits.
- Sensors (Voltage and Temperature): Monitor the real-time status of the battery.
- Comparator or Controller IC: Decides when to cut off based on sensor inputs.
- Switching Device (Transistor, Relay): Connects or disconnects the charging current.
- Display/Indicators: Show charging status, fault conditions, or completion signals.

Working Principles

The auto cutoff circuit operates based on continuous monitoring of the battery's condition. The general workflow is as follows:

- Initial Charging: When the battery is connected, the circuit supplies a controlled current and voltage suitable for the battery type.
- Monitoring: Sensors continuously measure the battery voltage and temperature to determine its state.
- Decision Making: The comparator or controller IC compares the sensor readings against predefined threshold values (e.g., maximum voltage, safe temperature).
