### Question 1: What is the primary function of a diode?

- a) Amplify signals
- b) Rectify AC into DC
- c) Store electrical energy
- d) Regulate voltage

Answer: b) Rectify AC into DC

Explanation:

A diode is a semiconductor device that allows current to flow in one direction only. Its primary function in circuits is to convert alternating current (AC) into direct current (DC), which is essential in power supply applications. While diodes can also be used for voltage regulation and signal demodulation, their main role in basic electronics is rectification.

- b)  $R + C$
- c)  $R / C$
- d)  $C / R$

Answer: a)  $R \times C$

Explanation:

The time constant ( $\tau$ ) for an RC circuit is the product of resistance (R) and capacitance (C). It indicates how quickly the capacitor charges or discharges; specifically, after a time equal to  $\tau$ , the voltage across the capacitor reaches approximately 63.2% of its final value.

#### **Question 4: Which logic gate outputs true only when all inputs are true?**

- a) OR gate
- b) AND gate
- c) NAND gate
