Sample Practice Question & Step-by-Step Solution

Question:

A ball is thrown vertically upward with an initial velocity of 20 meters per second. How high will the ball rise before falling back down? (Ignore air resistance.)

Solution:

This is a classic physics and math problem involving kinematic equations.

- Initial velocity $(v_0 = 20, \text{m/s})$
- Acceleration due to gravity $(g = 9.8, \text{m/s}^2)$

The maximum height (h) can be found using the formula:

$$h = \frac{v_0^2}{2g}$$

Calculating:

$$\left[h = \frac{(20)^2}{2 \times 9.8} = \frac{400}{19.6} \approx 20.41, \text{meters} \right]$$

Answer: The ball will rise approximately 20.41 meters.

Tip: Recognize that this involves kinematic equations and substituting known values.

Final Tips for Success

- Stay consistent: Regular practice beats cramming.
- Review mistakes: Understand why you missed questions.
- Stay calm and confident: A positive mindset enhances performance.
